Yuyao Alfirste Self-drilling Screw Dies

Sold to Asia and 20 other countries, Yuyao Alfirste Hardware's products are of good value for the price and therefore are highly acclaimed in the global fastener market. The company offers 3 types of self-drilling dies for both carbon steel and stainless steel: normal self-drilling point, small lightning point, and big lightning point dies. Also available are customized special point dies. Available from Model 1 to Model 5, the die diameters range from 2.4 to 7.4mm and the lengths from 4.0 to 18mm. They are suited for various self-drilling screws including self-drilling screws with reduced points, wing tek point screws, twist point screws, and self-drilling screws for carbon steel and 304/410 stainless steel.

Dies for Both Speed and Durability

Take the L3 self-drilling screw dies for manufacturing M5.5 self-drilling screws for example, the output drilling diameter is 4.2mm. The latest big lightning point dies by Yuyao Alfirste can complete consistent tapping on 2+3mm steel plates within 3 seconds and show no apparent damage after tapping 1 million times. In simple terms, the Yuyao Alfirste dies has the desired speed and durability and are easily configurable.

The company has a professional dies R&D staff who have been long studying new drilling points, improving existing designs and setting up a complete parameter criteria. It has a shorter R&D phase and can tailor-make depending on clients' requests. Currently it is developing 6-piece dies and has made initial progress. With a great team and a fully equipped dies manufacturing space, the company will continue to develop more screw dies.

Supplying Both Dies and Fasteners

Besides self-drilling screw dies, the company provides fast-tapping, quality-consistent and various sizes of self-drilling screws, timber screws, chipboard screws and other carbon steel and stainless steel products with excellent performance in fastening wood-structure houses as well as in corrosion resistance. The company features M3.0-M10/9.5mm-400mm long screws with quality guarantee.

Application for CNAS Lab Certificate in Progress - Looking to Boost Quality

In a macro-environment of challenges in supply chain and shipment, the company will continue to improve product development and competitiveness. It plans to expand by adding more manufacturing space as well as heat treatment and galvanizing production lines to reduce the cost and satisfy clients.

The company provides training every year to elevate personnel skills and technique. It has independent R&D capabilities to mass-produce quality-consistent dies that precede the industry level. Furthermore, the company has acquired CE and ETA certificates and is applying for a CNAS lab certificate, looking to achieve an industry-leading quality control level.

Looking forward to the new year, Yuyao Alfirste Hardware is excited to expand markets with more clients. "Original spirit, manufacture with heart." is the unchanging slogan that shows where we started. We will stick to it and stride on!"
