FWU KUANG ENTERPRISES CO., LTD.

Company Profile

For decades, FKE has been dedicated to developing new technologies and improving product quality. We have obtained 50 patents in 9 countries, including the class 14.99 screws, which outperform traditional class 12.9 products, and the high-speed bolt formers, now recognized globally as first-rate machines. Our socket set screws, socket head cap screws, and square head set screws are now widely used in the world. All our products are strictly tested in our own accredited laboratory before packing. Together with ISO-certified quality control and professional customer support, we have established high reputation as a world-class fastener provider.

Product Category

Wood Screws, Structural Screws, Special Screws, ODM.

Company Profile

We design the shank as triangle shape and the thread as saw-like for acexma-a (A type). When the screw drives into the wood, it goes in through the edge of triangle. It drives at high speed and reduces drive-in torque, and it saves energy as well. Besides, owing to the triangle function, it makes the screw tighter (anti-loosening). Furthermore, we also design the outer thread as triangle shape for acexma-b (B type) to make better cutting and also to prevent wood split. Acexma-b is now the best wood screw in the world.

YOW CHERN CO., LTD.

Product Category

Anchors, Automobile Parts, Aster Screws, Concrete Screws, Wood Screws, Special Part Per OEM, Window Screws, Self-drilling Screws, Nipple Screws.

Company Profile

Single and discontinuous thread can enlarge thread pitch to raise pull out value. Low helical angle is with low driving torque to save labor and with high clamping force to avoid loosening during vibration. Because of the downward-sloping design of asymmetrical pitch, when the bolt is pulled up, the inclined thread tends to push and press the concrete transversely so that the tightness will increase as the pulling force increases. Europe patent no. 1972800.
