

Globally Trusted Fastener Testing Lab *by Dean Tseng, Fastener World*

iTAC Laboratory Builds a Bridge Between Overseas Clients and Manufacturers

Although there are many quality labs around the world, iTAC Laboratory Co., Ltd is one of the few third-party labs with a focus on fasteners. Founded in 2005, iTAC took only a year to be certified to ISO/IEC 17025 by TAF. Dedicated to independence, fairness, and objectivity, iTAC is a professional third-party lab with a certificate equal to that of the American A2LA certificate. TAF is a member of the Mutual Recognition Arrangement, co-established by IAF and ILAC, therefore the test reports issued by iTAC are accredited worldwide.

Complete Package Offering Evaluation and Consultation

iTAC is the go-to partner for complete inspection services. Besides third-party test reports, the company provides: (1) third-party lab tests; (2) on-site test services at clients' designated sites; (3) plant evaluation, CQI-9 and CQI-11 evaluation; (4) PPAP documents and consultation; (5) consultation on the lab's outsourcing and subcontracting; (6) customized tests and test consultation; (7) consultation on other quality-related documents (drawings, specifications, regulations) and service.

iTAC provides quality inspections, but also provides supplier evaluations and quality monitoring for overseas clients, saving considerable personnel and travel expenses. The company has proficient quality inspection personnel in Yangtze River Delta of China (including

Shanghai, Suzhou, Hangzhou, Jiashan, Haiyan and Ningbo) to provide clients with on-site inspection services, ensuring that product quality of their orders made in China maintain the highest quality standards.

Value-added Services Exceeding What Test Labs Typically Offer

iTAC is more than a testing lab. It has a team highly experienced in fastener manufacturing, with an extensive knowledge of improving communication between buyers and manufacturers. Clear and timely communication enhances the trust between overseas clients and their suppliers, enabling iTAC to provide effective, win-win solutions between both parties. This is a hidden, but very important added benefit delivered by iTAC. This also allows iTAC to develop a deep understanding of market and demand trends.

Inspection Expert - iTAC Knows Your Quality Requirements

Another strength of iTAC is its deep knowledge of the various test standards and methods used in the fastener industry. The company can effectively help clients spot non-compliant orders before products are shipped, avoiding exorbitant indemnities and substantially reducing the time and cost of handling customer complaints. iTAC continues to add new inspection equipment, and is building a cloud database that soon will allow clients to search test records through a superb user interface experience. iTAC excels at serving fastener buyers with its strong variety of services. Contact iTAC for your next overseas order and put their experience and expertise to work for your company. ■
