Hey Yo Technology Inaugurates New Office

by Gang Hao Chang, Vice Editor-in-Chief of Fastener World

In order to remove the stereotype of “oily and sooty” customers usually have on processing units and factories, Hey Yo Technology Co., Ltd. specialized in manufacturing precision pins/rollers/dowel pins has separated the factory from its main office to create a comfortable space for conferences and discussions. The Daya, Taichung-based new office has been recently inaugurated. The new office not only demonstrates Hey Yo’s character of continuously improving with the times, but also is equipped with a new 2.5D projection inspection device (2.5D CMM) to keep seamless quality control of every batch of goods ready for shipping.

Complete Supply of ISO 2338, ISO 8734, DIN 6325 Dowel Pin Series

Standard ISO 2338, ISO 8734, DIN 6325 dowel pins or other high precision ground items are all Hey Yo’s major products. Dowel pins are mainly made from SUJ2, SUS303, SUS304, SUS420; the range of external diameter processing is 0.6-4mm; the range of length processing is 2-45mm; featuring very thin external diameter. Hey Yo adopted automatic grinding machines to enhance stability and successfully developed the dowel pins with the precision of external diameter grinding at 0.003mm and the superficial roughness below Ra0.1.

With a monthly capacity of 5 million pcs, Hey Yo is able to satisfy users’ demand for a great amount of dowel pins and keep non-stop supply of high-precision and high-quality products that help users achieve more efficient work, better assembly stability of products, and more competitive prices.

“As a professional processing factory, we deeply realize that quality is like a ticket for one to go into the international market. We’ve got everything needed for the inspection of dowel pins, which includes the newly equipped 2.5D projection inspection device (2.5D CMM). The upgrade of inspection devices is also the best proof of our quality. Not only the establishment of our new office provides customers with a better environment for communication, but also the newly added projector allows us to launch any project meeting more instantaneously and offer customers the most complete inspection reports for good quality control,” says Hey Yo General Manager Gary Chang.

Creating Differences of Products, Hey Yo Also Offers More Competitive Options

Dowel pins look tiny but actually play an indispensable role in various assembly applications. In the past, manufacturing regular ISO 2338, ISO 8734, and DIN 6325 compliant dowel pins would need the use of CNC machining lathes to meet demands of customers' drawings due to requirements for lead angles. Hey Yo values the communication of product design a lot and is able to solve customers' problems with high efficiency and offer total solutions. Without changing the quality and applications, Hey Yo adopted a self-developed dowel pin processing machine to facilitate manufacturing efficiency and provide customers with another option to get access to better performing and cheaper dowel pins. Through efficient communication and creation of product differences, Hey Yo has recently received an order placement from one Italian customer via Fastener World's online B2B platform.

"Fasteners and dowel pins with the outer diameter (O.D.) below 1.5mm and the precision of outer diameter (O.D.) grinding below 0.005mm are almost our strengths. For other market players, the minimum outer diameter (O.D.) grinding they can achieve is only 1.5mm," says General Manager Chang.

Due to such technical capabilities, insistence on quality, and peripheral CNC lathe and milling service, sales of Hey Yo continued to grow last year. General Manager Chang added, "With the inauguration of a new office to further improve operation and service, I hope that Hey Yo's sales this year will reach a record high again."

Integrated Supply Chain and One-stop Service

In order to develop a more complete customer service, Hey Yo has integrated lots of superior suppliers and makes the most of division of labor based on specialization to reduce manufacturing costs and promote product quality. Chang noted, "Through Hey Yo's years of experience and profession in product processing, we only contact the right ones to do the right things! We seek for resource integration and offer customers one-stop professional service in order to achieve the multiplier effect and make the reputation of 'Made in Taiwan' shine bright!"
