

REXSON FASTENERS

Guanmiao New Plant to be Operational This March

Rexson Fasteners Inc. specializes in the development and production of various screws and parts. Its main products and services include: stainless steel screws, automotive parts, special products, special function parts, and customer sample production. Its products are available in dimensions of M1.4*2-M10*200 and can be produced in stainless steel, carbon steel, brass, and copper. As the global industry is gradually recovering after the epidemic and the economy is picking up, in response to the growing demand for fasteners and in order to optimize its services, Rexson has recently set up a new factory in Guanmiao, Tainan, and the original factory in Guiren will continue to operate. It is expected that with the synergy of the two plants in Guiren and Guanmiao, the company will be able to provide the best quality products and services to meet the diversified needs of global customers.

Expansion of Production Capacity & Introduction of New Machines

“The main purpose of the Guanmiao plant is to expedite the solution of the existing capacity of the Gueiren plant, which is about to run out of capacity. The new plant is expected to be in operation by the end of March. In addition to expanding production capacity, the new plant will also introduce some equipment and machines with specific differences to meet customers' needs for a wide range of products and to enable faster and more efficient delivery of products,” said Kevin Wu, General Manager of Rexson.

The new factory area of 2,380 sq m is clearly defined with dedicated areas for 1-die 2-blow forming, multi-blow forming, thread rolling, sorting, packaging, etc. Among them, the stainless steel screw, sorting, and packaging areas are new highlights from the old factory. The equipment has also been upgraded, including the introduction of 1-die 2-blow rounding and shearing machines, 5-die 5-blow forming machines, thread rolling machines (M12*200L) and several 1-die 2-blow and thread rolling machines, which can help provide customers with better and stable quality products. With the expansion of production capacity and more brand-new equipment, it expects to be able to improve the development of special screws and the manufacturing of stainless steel/carbon steel products. With the addition of the new plant, the monthly production capacity of stainless steel products will reach 80-100 metric tons.

Strengthening the Market Layout & Developing EV and Stainless Steel Construction Screw Markets

Rexson has obtained the ISO 9001-2015 quality management system certification and its products are mainly sold to industrial customers in the U.S. and Europe, with the U.S. accounting for nearly 60% and Europe accounting for about 30%. This shows that its products and services are well trusted by its customers in Europe and the U.S.

“Our stainless steel products are used in a wide range of industries and can significantly reduce maintenance costs. We will also focus on the EV and stainless steel construction screw markets in the future as demand trends continue. In the face of the opportunities and challenges that lie ahead in 2023, I believe that crises are opportunities. In the current market with uncertainties, we will first make physical adjustments to meet the future challenges, and more importantly, provide customers with faster and better quality service to meet the market demand,” said General Manager Wu.
