# Cold Forged EXTRA-LONG BOLTS by EVERBEST HARDWARE

## Highlight for Sales to Europe and America

Everbest Hardware Products Co., Ltd. specializes in the production of extra long bolts, hanger bolts, long nuts, lock washers, and peripheral machined parts made of carbon steel, alloy steel, stainless steel and brass, all of which conform to international standards such as GB, DIN, ANSI, BS, and ISO. With excellent product quality, outstanding development capability and perfect service, it has been gaining high praise from customers in the highly competitive global market for years. In particular, its current focus on the development of extra-long bolts has successfully attracted the attention of many European and American buyers.

### Solid Technology Making It Easier to Cater to Customers' Customization Needs

Everbest Hardware has introduced many sets of advanced production equipment in its 8,000 square meters plant, including multi-station cold forging machines, multi-station longer-size forming machines, thread rolling machines, thread tapping machines, punching machines, etc. With the leading production process and complete inspection methods, it has created for itself a strong technical base. At present, its capacity can reach 2,000 metric tons per month. In addition to standard parts, it can also develop and produce customized products according to different customers' requirements and drawings. Nearly 90% of its products are exported to Europe, the U.S., Australia, India and South America, and are mainly applied to the building structures, automobiles, highways, railroads, electrical, power and furniture industries.

### Adopting Cold Forging to Create Long Bolts with More Advantageous Features

Different from other counterparts using hot forging to process bolts, Everbest Hardware adopts cold forging to process long bolts with better dimensional control, better surface finish, higher productivity, and most importantly, competitive prices.

These long bolts are currently available in carbon steel, alloy steel and 304/316 stainless steel, with the diameters of M3-M16 and lengths of up to 1,000mm (for M3-M6) and 370mm (for M8-M16), which are galvanized, zinc plated or hot dipped galvanized in grades 4.8/8.8/10.9/G2/G5/G8. Moreover, they can be also made to distinguished head types, diameters, and strengths as per customer's request.

Facing the challenges of the new year, Everbest Hardware will continue to develop the European, American and Southeast Asian markets, and further develop and promote the cold forged extra long bolts. The Company takes "Quality, Honesty, and Customers First" as its mission statement. It wins an excellent reputation and customers' trust in the market with sincere service and constantly improves product quality to meet customers' requirements. The Company sincerely hopes to establish close business contacts with domestic and foreign partners for mutual cooperation and common development in the future! ■
