Quality, Service and Competitive Price

For the past 30 years, Kang Tai Industrial has been focused on manufacturing hex keys, including ball-point hex keys, star hex keys, cross-handle hex keys and other hex keys related products, sold across the world. They are committed to the best quality, service and price. In terms of quality, they use the highest standard of quality check to manufacture; in terms of service, they are able to meet the needs of customers and make products that customers need. If customers have any problems with products, they will handle immediately. As a manufacturer, they can offer the most competitive price on the market. In addition to wrenches, they have recently added smart door lock adjustment tools and security door locking keys to their product lineup, by taking advantage of the various forms of wire shape. This breathes new life and novelty into their product line.

At present, they manufacture products and sell them in Taiwan, and they also sell products overseas to Japan and Europe through traders. In addition, they are an OEM supplying brands in Taiwan, Japan, Europe and the US, and have acquired quality certifications from globally renowned brands. **Being an OEM for international brands, they are able to heighten 30 years of expertise and manufacture higher level products.**

New Blood in the Team to Push for Product Upgrade

Initially they focused on supplying screw companies, distributors, wholesalers, as well as the DIY tool and OEM markets. In the process of taking over the company, the business successor from the second generation who joined the team in recent years wants to diversify the products and markets. He wants to not only supply screw companies, distributors, wholesalers, the DIY tool and OEM markets, but also to expand to new markets, so he is **investing in the more advanced professional hand tool market**. In addition, he is preparing to apply for international certificates, hoping that through multi-faceted management and sales, their products can be found in all countries, and their business can sustain.

European Standard Quality & Customized Products

Their products are available in stock not only in metric and imperial sizes, but also in customized sizes, colors and packaging that are purchased by a large number of customers. **Their quality is controlled by using Rockwell hardness testers and salt spray test, and their surface treatment complies with EU regulations.** For all the basic gaging tools, they use precision gauges made by Japanese brands, and customers can rest assured with their product quality. They have quality and service under control to ensure product quality is in the best condition. Product specifications can be made to the customer's needs which will be met as quickly as possible.

According to Kang Tai Industrial, the DIY market was first prevalent in Europe and the US, and slowly spread to Asian countries and the world. In the future, they will continue to move towards the market of professional-grade maintenance tools, and meanwhile they will keep supplying screw companies, distributors, wholesalers, and the DIY tools market for home use. All screw companies, tool companies and traders are welcome to contact them for ODM and OEM services. □
