

# New from Yun Chan Industry!

## YC-PU001 Easy-grip Pro Screwdriver Bits

### 雍昌工業新品上市！YC-PU001易取起子頭

Yun Chan Industry has been focused on the R&D and manufacturing of hand tools for 50 years. Their core products include screwdriver sets, sockets, various screwdriver bits, extension rods, and customized tool parts. With stable quality, flexible production capabilities, and professional customization services, they have earned the trust of customers at home and abroad.

They have introduced automated equipment and smart manufacturing management systems in recent years, improving production capacity and quality stability as well as lead time management. In addition to ISO 9001, they have passed DUNS and TÜV. Continuing to expand overseas markets, they have successfully entered multiple major European and American distribution channels and worked with brands in the supply chain as a solid foundation for corporate transformation and growth.

### Patent Screwdriver Bits Certified in Taiwan and the U.S.

Conventional screwdriver bits are often difficult to remove from storage boxes or tools in use, especially when users wear gloves, which can cause slipping. Answering customer requests, Yun Chan Industry's developers launched a project in 2023 to develop the "YC-PU001 Easy-grip Pro Screwdriver Bit."

This product features an ergonomically designed **Diamond-Shaped Knurled Surface** that enhances fingertip grip. Even when wearing gloves or with sweaty palms, users can easily remove and put the bit into the box or magnetic holder, reducing the risk of dropping during operation and improving work efficiency.

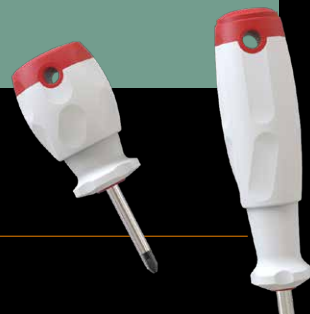

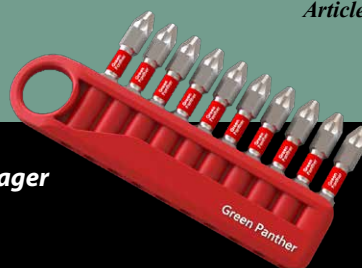

The bit undergoes surface treatment (options including nickel plating, chrome plating, and black phosphate coating), providing **High Corrosion Resistance and Friction Strength** that make them 2 to 3 times more durable than ordinary bits. Made from S2 high-alloy steel, it exhibits **Excellent Heat and Fatigue Resistance**, passing 10,000-cycle torque tests without breaking, suitable for repeated assembly and frequent use in automotive and machinery assembly lines. Yun Chan Industry stated that mass production began in Q4 2024, with OEM customized service available. This product has already been incorporated into the product lines of several professional brands.

### Capacity to Increase 30% Meeting Increased European and American Demand

The company revealed that demand for high-quality hand tools in Europe and the U.S. is steadily growing, particularly in DIY, automotive repair, machinery maintenance, and electrical engineering sectors, which continue to drive sales of screwdriver sets and sockets. Although local European and American manufacturers exist, high production costs mean high reliance on imports. "We have partnered with well-known European tool brands to supply tool kits and successfully entered major U.S. hardware retail chains. We penetrate the market through exhibitions and OEM collaborations, providing know-how and technical support to build trust. European and American buyers value stable quality, flexible supply, compliant design and certification, and cost-effective pricing. We reduce costs through modular design, offer low MOQ customization options, and apply for certifications like GS and CE to meet diverse market needs."

Looking ahead, they are planning to: (1) expand automated production lines to increase capacity by 30%; (2) exhibit in hardware shows in Cologne and Las Vegas; (3) strengthen professional OEM services to increase international visibility; (4) focus on environmentally friendly hand tool supply. "We adhere to 'stable quality, flexible supply, innovative R&D' and look forward to becoming your long-trusted partner. Buyers worldwide are welcome to join us to make a win-win!" said the company. □
